

Installing TYP03 5.0

TYP03 Developer Days 25.-29.04.2007, Dietikon / Switzerland

Inspiring people to
share

Architecture

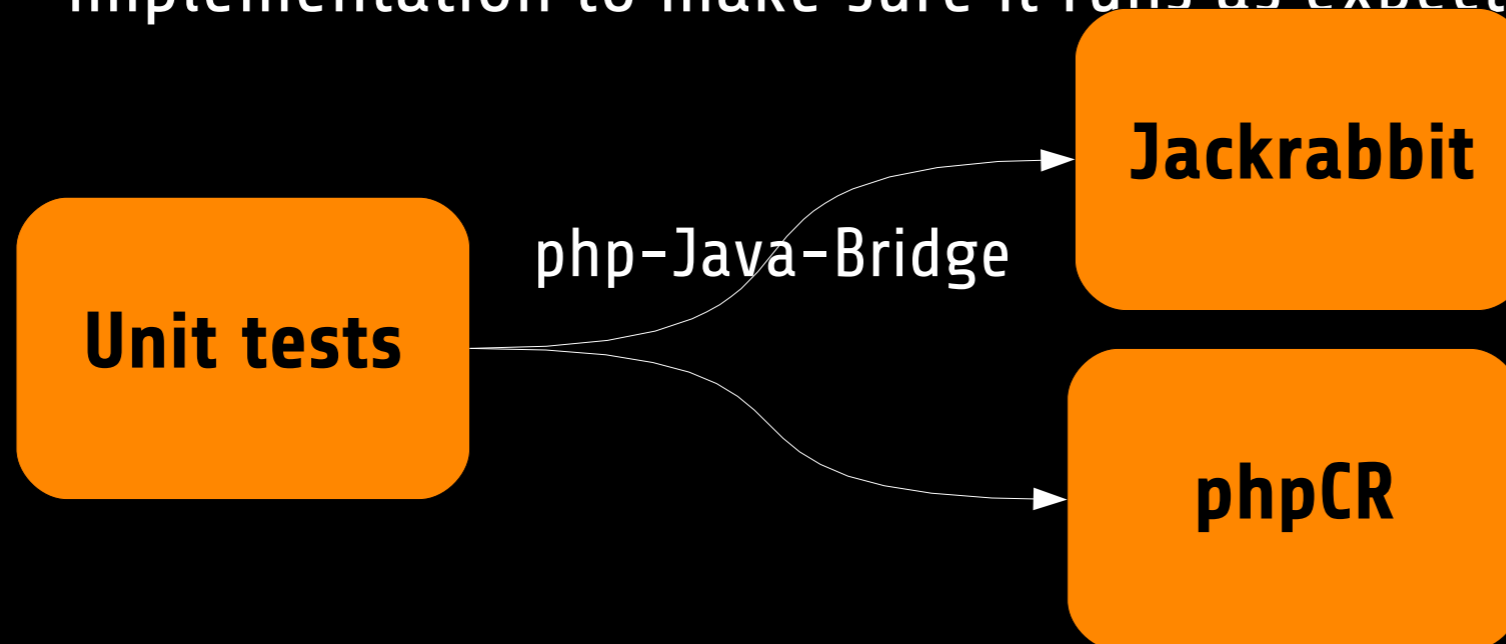

- TYP03 5.0 will use a Content Repository for data storage
- after evaluation, we decided on the JSR-170 standard
- Reference implementation: Apache Jackrabbit
- as a start, we will use Jackrabbit
- afterwards, we will replace Jackrabbit by our own PHP implementation (phpCR)

Inspiring people to
share

Jackrabbit

- is Java-based
- PHP-Java-Bridge needed to run unit tests
- We will recycle these unit tests later on for our own implementation to make sure it runs as expected

Inspiring people to
share

Installation prerequisites

- PHP 5.2 needed
- for Jackrabbit: JRE / JDK needed
- the PHP-Java-Bridge will be compiled automatically (hopefully ;)

share

Automatic installation

- Follow the instructions at our development website:
- <http://www.5-0.dev.typo3.org/trac/TYP03/wiki/QuickInstallation>
- Give us feedback!
